December 3, 2023

00AH This chapter contains a discussion of the un/straightening equivalence in the context of sets, as well as a general discussion of indexed and fibred sets. In particular, it contains:

1. A discussion of indexed sets (i.e. functors $K_{\text{disc}} \rightarrow \text{Sets}$ with K a set), constructions with them like dependent sums and dependent products, and their properties ([Sections 1](#) and [2](#));
2. A discussion of fibred sets (i.e. maps of sets $X \rightarrow K$), constructions with them like dependent sums and dependent products, and their properties ([Sections 3](#) and [4](#));
3. A discussion of the un/straightening equivalence for indexed and fibred sets ([Section 5](#)).
