0073 1 Pointed Sets

0074 1.1 Foundations

0075 **Definition 1.1.1.1.** A **pointed set**¹ is equivalently

- An \mathbb{E}_0 -monoid in $(N_\bullet(\mathbf{Sets}), \text{pt})$;
- A pointed object in $(\mathbf{Sets}, \text{pt})$.

0076 **Remark 1.1.1.2.** In detail, a **pointed set** is a pair (X, x_0) consisting of

- *The Underlying Set.* A set X , called the **underlying set of** (X, x_0) ;
- *The Basepoint.* A morphism

$$[x_0]: \text{pt} \rightarrow X$$

in \mathbf{Sets} , determining an element $x_0 \in X$, called the **basepoint of** X .

0077 **Example 1.1.1.3.** The **0-sphere**² is the pointed set $(S^0, 0)$ ³ consisting of

- *The Underlying Set.* The set S^0 defined by

$$S^0 \stackrel{\text{def}}{=} \{0, 1\};$$

- *The Basepoint.* The element 0 of S^0 .

0078 **Example 1.1.1.4.** The **trivial pointed set** is the pointed set (pt, \star) consisting of

- *The Underlying Set.* The punctual set $\text{pt} \stackrel{\text{def}}{=} \{\star\}$;
- *The Basepoint.* The element \star of pt .

0079 **Example 1.1.1.5.** The **underlying pointed set** of a semimodule (M, α_M) is the pointed set $(M, 0_M)$.

007A **Example 1.1.1.6.** The **underlying pointed set** of a module (M, α_M) is the pointed set $(M, 0_M)$.

¹*Further Terminology:* Also called an \mathbb{F}_1 -**module**.

²*Further Terminology:* Also called the **underlying pointed set of the field with one element**.

³*Further Notation:* Also denoted $(\mathbb{F}_1, 0)$.

007B 1.2 Morphisms of Pointed Sets

007C **Definition 1.2.1.1.** A **morphism of pointed sets**⁴ is equivalently

- A morphism of \mathbb{E}_0 -monoids in $(N_\bullet(\mathbf{Sets}), \text{pt})$.
- A morphism of pointed objects in $(\mathbf{Sets}, \text{pt})$.

007D **Remark 1.2.1.2.** In detail, a **morphism of pointed sets** $f: (X, x_0) \rightarrow (Y, y_0)$ is a morphism of sets $f: X \rightarrow Y$ such that the diagram

$$\begin{array}{ccc} & \text{pt} & \\ [x_0] \swarrow & & \searrow [y_0] \\ X & \xrightarrow{f} & Y \end{array}$$

commutes, i.e. such that

$$f(x_0) = y_0.$$

007E 1.3 The Category of Pointed Sets

007F **Definition 1.3.1.1.** The **category of pointed sets** is the category \mathbf{Sets}_* defined equivalently as

- The homotopy category of the ∞ -category $\text{Mon}_{\mathbb{E}_0}(N_\bullet(\mathbf{Sets}), \text{pt})$ of Monoids in Monoidal ∞ -Categories, ??;
- The category \mathbf{Sets}_* of **Categories**, ??.

007G **Remark 1.3.1.2.** In detail, the **category of pointed sets** is the category \mathbf{Sets}_* where

- *Objects.* The objects of \mathbf{Sets}_* are pointed sets;
- *Morphisms.* The morphisms of \mathbf{Sets}_* are morphisms of pointed sets;
- *Identities.* For each $(X, x_0) \in \text{Obj}(\mathbf{Sets}_*)$, the unit map

$$\text{id}_{(X, x_0)}^{\mathbf{Sets}_*}: \text{pt} \rightarrow \mathbf{Sets}_*((X, x_0), (X, x_0))$$

of \mathbf{Sets}_* at (X, x_0) is defined by⁵

$$\text{id}_{(X, x_0)}^{\mathbf{Sets}_*} \stackrel{\text{def}}{=} \text{id}_X;$$

⁴ *Further Terminology:* Also called a **pointed function** or a **morphism of \mathbb{F}_1 -modules**.

⁵ Note that id_X is indeed a morphism of pointed sets, as we have $\text{id}_X(x_0) = x_0$.

- *Composition.* For each $(X, x_0), (Y, y_0), (Z, z_0) \in \text{Obj}(\text{Sets}_*)$, the composition map

$$\circ_{(X, x_0), (Y, y_0), (Z, z_0)}^{\text{Sets}_*} : \text{Sets}_*((Y, y_0), (Z, z_0)) \times \text{Sets}_*((X, x_0), (Y, y_0)) \rightarrow \text{Sets}_*((X, x_0), (Z, z_0))$$

of Sets_* at $((X, x_0), (Y, y_0), (Z, z_0))$ is defined by⁶

$$g \circ_{(X, x_0), (Y, y_0), (Z, z_0)}^{\text{Sets}_*} f \stackrel{\text{def}}{=} g \circ f.$$

007H 1.4 Elementary Properties of Pointed Sets

007J **Proposition 1.4.1.1.** Let (X, x_0) be a pointed set.

- 007K 1. *Completeness.* The category Sets_* of pointed sets and morphisms between them is complete, having in particular products (Definition 2.1.1.1), pullbacks (Definition 2.3.1.1), and equalisers (Definition 2.2.1.1).
- 007L 2. *Cocompleteness.* The category Sets_* of pointed sets and morphisms between them is cocomplete, having in particular coproducts (Definition 3.1.1.1), pushouts (Definition 3.2.1.1), and coequalisers (Definition 3.3.1.1).
- 007M 3. *Failure To Be Cartesian Closed.* The category Sets_* is not Cartesian closed.
- 007N 4. *Relation to Partial Functions.* We have an equivalence of categories⁷

$$\text{Sets}_* \stackrel{\text{eq.}}{\cong} \text{Sets}^{\text{part.}}$$

⁶Note that the composition of two morphisms of pointed sets is indeed a morphism of pointed sets, as we have

$$\begin{aligned} g(f(x_0)) &= g(y_0) \\ &= z_0, \end{aligned}$$

or

$$\begin{array}{ccccc} & & \text{pt} & & \\ & \swarrow & \downarrow & \searrow & \\ [x_0] & & [y_0] & & [z_0] \\ & \swarrow & \downarrow & \searrow & \\ X & \xrightarrow{f} & Y & \xrightarrow{g} & Z \end{array}$$

in terms of diagrams.

⁷*Warning:* This is not an isomorphism of categories, only an equivalence.

between the category of pointed sets and pointed functions between them and the category of sets and partial functions between them.
