006X 1 Pointed Sets

006Y 1.1 Foundations

006Z **Definition 1.1.1.1.** A **pointed set**¹ is equivalently

- An \mathbb{E}_0 -monoid in $(N_\bullet(\mathbf{Sets}), \text{pt})$;
- A pointed object in $(\mathbf{Sets}, \text{pt})$.

0070 **Remark 1.1.1.2.** In detail, a **pointed set** is a pair (X, x_0) consisting of

- *The Underlying Set.* A set X , called the **underlying set of** (X, x_0) ;
- *The Basepoint.* A morphism

$$[x_0]: \text{pt} \rightarrow X$$

in \mathbf{Sets} , determining an element $x_0 \in X$, called the **basepoint of** X .

0071 **Example 1.1.1.3.** The **0-sphere**² is the pointed set $(S^0, 0)$ ³ consisting of

- *The Underlying Set.* The set S^0 defined by

$$S^0 \stackrel{\text{def}}{=} \{0, 1\};$$

- *The Basepoint.* The element 0 of S^0 .

0072 **Example 1.1.1.4.** The **trivial pointed set** is the pointed set (pt, \star) consisting of

- *The Underlying Set.* The punctual set $\text{pt} \stackrel{\text{def}}{=} \{\star\}$;
- *The Basepoint.* The element \star of pt .

0073 **Example 1.1.1.5.** The **underlying pointed set** of a semimodule (M, α_M) is the pointed set $(M, 0_M)$.

0074 **Example 1.1.1.6.** The **underlying pointed set** of a module (M, α_M) is the pointed set $(M, 0_M)$.

¹Further Terminology: Also called an \mathbb{F}_1 -module.

²Further Terminology: Also called the **underlying pointed set of the field with one element**.

³Further Notation: Also denoted $(\mathbb{F}_1, 0)$.

0075 1.2 Morphisms of Pointed Sets

0076 **Definition 1.2.1.1.** A **morphism of pointed sets**⁴ is equivalently

- A morphism of \mathbb{E}_0 -monoids in $(\mathbf{N}_\bullet(\mathbf{Sets}), \text{pt})$.
- A morphism of pointed objects in $(\mathbf{Sets}, \text{pt})$.

0077 **Remark 1.2.1.2.** In detail, a **morphism of pointed sets** $f: (X, x_0) \rightarrow (Y, y_0)$ is a morphism of sets $f: X \rightarrow Y$ such that the diagram

$$\begin{array}{ccc} & \text{pt} & \\ [x_0] \swarrow & & \searrow [y_0] \\ X & \xrightarrow{f} & Y \end{array}$$

commutes, i.e. such that

$$f(x_0) = y_0.$$

0078 1.3 The Category of Pointed Sets

0079 **Definition 1.3.1.1.** The **category of pointed sets** is the category \mathbf{Sets}_* defined equivalently as

- The homotopy category of the ∞ -category $\mathbf{Mon}_{\mathbb{E}_0}(\mathbf{N}_\bullet(\mathbf{Sets}), \text{pt})$ of Monoids in Monoidal ∞ -Categories, ??;
- The category \mathbf{Sets}_* of **Categories**, ??.

007A **Remark 1.3.1.2.** In detail, the **category of pointed sets** is the category \mathbf{Sets}_* where

- *Objects.* The objects of \mathbf{Sets}_* are pointed sets;
- *Morphisms.* The morphisms of \mathbf{Sets}_* are morphisms of pointed sets;
- *Identities.* For each $(X, x_0) \in \text{Obj}(\mathbf{Sets}_*)$, the unit map

$$\mathbb{K}_{(X, x_0)}^{\mathbf{Sets}_*} : \text{pt} \rightarrow \mathbf{Sets}_*((X, x_0), (X, x_0))$$

of \mathbf{Sets}_* at (X, x_0) is defined by⁵

$$\text{id}_{(X, x_0)}^{\mathbf{Sets}_*} \stackrel{\text{def}}{=} \text{id}_X;$$

⁴*Further Terminology:* Also called a **pointed function** or a **morphism of \mathbb{F}_1 -modules**.

⁵Note that id_X is indeed a morphism of pointed sets, as we have $\text{id}_X(x_0) = x_0$.

- *Composition.* For each $(X, x_0), (Y, y_0), (Z, z_0) \in \text{Obj}(\text{Sets}_*)$, the composition map

$$\circ_{(X, x_0), (Y, y_0), (Z, z_0)}^{\text{Sets}_*} : \text{Sets}_*((Y, y_0), (Z, z_0)) \times \text{Sets}_*((X, x_0), (Y, y_0)) \rightarrow \text{Sets}_*((X, x_0), (Z, z_0))$$

of Sets_* at $((X, x_0), (Y, y_0), (Z, z_0))$ is defined by⁶

$$g \circ_{(X, x_0), (Y, y_0), (Z, z_0)}^{\text{Sets}_*} f \stackrel{\text{def}}{=} g \circ f.$$

007B 1.4 Elementary Properties of Pointed Sets

007C **Proposition 1.4.1.1.** Let (X, x_0) be a pointed set.

- 007D 1. *Completeness.* The category Sets_* of pointed sets and morphisms between them is complete, having in particular products (Definition 2.1.1.1), pullbacks (Definition 2.3.1.1), and equalisers (Definition 2.2.1.1).
- 007E 2. *Cocompleteness.* The category Sets_* of pointed sets and morphisms between them is cocomplete, having in particular coproducts (Definition 3.1.1.1), pushouts (Definition 3.2.1.1), and coequalisers (Definition 3.3.1.1).
- 007F 3. *Failure To Be Cartesian Closed.* The category Sets_* is not Cartesian closed.
- 007G 4. *Relation to Partial Functions.* We have an equivalence of categories⁷

$$\text{Sets}_* \stackrel{\text{eq.}}{\cong} \text{Sets}^{\text{part.}}$$

between the category of pointed sets and pointed functions between them and the category of sets and partial functions between them.

⁶Note that the composition of two morphisms of pointed sets is indeed a morphism of pointed sets, as we have

$$\begin{aligned} g(f(x_0)) &= g(y_0) \\ &= z_0, \end{aligned}$$

or

in terms of diagrams.

⁷Warning: This is not an isomorphism of categories, only an equivalence.

Proof. **Item 1**, *Completeness*: Omitted.

Item 2, *Cocompleteness*: Omitted.

Item 3, *Failure To Be Cartesian Closed*: See [MSE2855868].

Item 4, *Relation to Partial Functions*: Omitted. □
