at X is given by the composition

$$\begin{aligned} X \rhd_{\mathsf{Sets}_*} S^0 &\cong |X| \odot S^0 \\ &\cong \bigvee_{x \in X} S^0 \\ &\to X \end{aligned}$$

00A4 4.5 The Right-Skew Monoidal Category Structure on Pointed Sets

00A5 **Proposition 4.5.1.1.** The category Sets_* admits a right-skew monoidal category structure consisting of[18]

- *The Skew Monoidal Product.* The right tensor product functor

  $$\rhd_{\mathsf{Sets}_*} \colon \mathsf{Sets}_* \times \mathsf{Sets}_* \to \mathsf{Sets}_*,$$

  of Item 1;

- *The Skew Monoidal Unit.* The functor

  $$\mathbb{1}^{\mathsf{Sets}_*} \colon \mathrm{pt} \to \mathsf{Sets}_*$$

  defined by

  $$\mathbb{1}_{\mathsf{Sets}_*} \stackrel{\text{def}}{=} S^0;$$

- *The Skew Associators.* The natural isomorphism

  $$\alpha^{\mathsf{Sets}_*,\rhd} \colon \rhd_{\mathsf{Sets}_*} \circ (\rhd_{\mathsf{Sets}_*} \times \mathrm{id}_{\mathsf{Sets}_*}) \xRightarrow{\cong} \rhd_{\mathsf{Sets}_*} \circ (\mathrm{id}_{\mathsf{Sets}_*} \times \rhd_{\mathsf{Sets}_*}),$$

  of Definition 4.2.1.1;

---

[17] In other words, $\rho_X^{\mathsf{Sets}_*,\rhd}$ acts on elements as

$$\begin{aligned} \rho_X^{\mathsf{Sets}_*,\rhd}(x \rhd_{\mathsf{Sets}_*} 0) &\stackrel{\text{def}}{=} x, \\ \rho_X^{\mathsf{Sets}_*,\rhd}(x \rhd_{\mathsf{Sets}_*} 1) &\stackrel{\text{def}}{=} x \end{aligned}$$

for each $x \in X$.

[18] Note in particular that, differently from general right-skew monoidal categories, the skew associator of

- *The Skew Left Unitors.* The natural transformation

$$\lambda^{\mathsf{Sets}_*,\triangleright} \colon \mathrm{id}_{\mathsf{Sets}_*} \Longrightarrow \triangleright_{\mathsf{Sets}_*} \circ (\mathbb{1}^{\mathsf{Sets}_*} \times \mathrm{id}_{\mathsf{Sets}_*}),$$

  of Definition 3.3.1.1;

- *The Skew Right Unitors.* The natural transformation

$$\rho^{\mathsf{Sets}_*,\triangleright} \colon \triangleright_{\mathsf{Sets}_*} \circ (\mathrm{id}_{\mathsf{Sets}_*} \times \mathbb{1}^{\mathsf{Sets}_*}) \Longrightarrow \mathrm{id}_{\mathsf{Sets}_*},$$

00A6 5 Smash Products of Pointed Sets

00A7 5.1 Foundations

Let (X, x_0) and (Y, y_0) be pointed sets.

00A8 **Definition 5.1.1.1.** The **smash product of** (X, x_0) **and** (Y, y_0)[19] is the pointed set $X \wedge Y$[20] such that we have a bijection

$$\mathsf{Sets}_*(X \wedge Y, Z) \cong \mathrm{Hom}^{\otimes}_{\mathsf{Sets}_*}(X \times Y, Z),$$

natural in $(X, x_0), (Y, y_0), (Z, z_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$.

00A9 **Remark 5.1.1.2.** In detail, the **smash product of** (X, x_0) **and** (Y, y_0) is the pair $((X \wedge Y, [(x_0, y_0)]), \iota)$ consisting of

- A pointed set $(X \wedge Y, [(x_0, y_0)])$;
- A bilinear morphism of pointed sets $\iota \colon (X \times Y, (x_0, y_0)) \to X \wedge Y$;

satisfying the following universal property:

(UP) Given another such pair $((Z, z_0), f)$ consisting of

  - A pointed set (Z, z_0);
  - A bilinear morphism of pointed sets $f \colon (X \times Y, (x_0, y_0)) \to X \wedge Y$;

$(\mathsf{Sets}_*, \triangleright_{\mathsf{Sets}_*}, S^0)$ is a natural isomorphism.

[19] *Further Terminology:* Also called the **tensor product of** $\mathbb{F}_1$**-modules of** (X, x_0) **and** (Y, y_0) or the **tensor product of** (X, x_0) **and** (Y, y_0) **over** $\mathbb{F}_1$.

[20] *Further Notation:* Also written $X \otimes_{\mathbb{F}_1} Y$.

there exists a unique morphism of pointed sets $X \wedge Y \xrightarrow{\exists!} Z$ making the diagram

$$\begin{tikzcd}
& X \wedge Y \arrow[d, dashed, "\exists!"] \\
X \times Y \arrow[ur, "\iota"] \arrow[r, "f"'] & Z
\end{tikzcd}$$

commute.

00AA **Construction 5.1.1.3.** Concretely, the **smash product of** (X, x_0) **and** (Y, y_0) is the pointed set $(X \wedge Y, [(x_0, y_0)])$ consisting of[21]

- *The Underlying Set.* The set $X \wedge Y$ defined by

$$\begin{aligned} X \wedge Y &\cong \mathrm{pt} \coprod_{X \vee Y} (X \times Y) \\ &\overset{\text{def}}{=} \frac{X \times Y}{X \vee Y} \\ &\cong X \times Y/\sim, \end{aligned} \qquad \begin{tikzcd} X \wedge Y \arrow[dr, phantom, "\ulcorner", very near start] & X \times Y \arrow[l] \\ \mathrm{pt} \arrow[u] & X \vee Y, \arrow[l, "!"] \arrow[u, hook] \end{tikzcd}$$

  where $\sim$ is the equivalence relation of $X \times Y$ obtained by declaring $(x, y) \sim (x', y')$ iff $(x, y), (x', y') \in X \vee Y$, i.e. by declaring

$$\begin{aligned} (x_0, y) &\sim (x_0, y'), \\ (x, y_0) &\sim (x', y_0) \end{aligned}$$

  for all $x \in X$ and all $y \in Y$;

- *The Basepoint.* The element $[(x_0, y_0)]$ of $X \wedge Y$ given by the equivalence class of (x_0, y_0) under the equivalence relation $\sim$ on $X \times Y$.

Proof. Clear. □

[21] *Further Notation:* We write $x \wedge y$ for the image of (x, y) under the quotient map

$$X \times Y \twoheadrightarrow \underbrace{\frac{X \times Y}{X \vee Y}}_{\overset{\text{def}}{=} X \wedge Y}$$

Note that we have

$$\begin{aligned} x \wedge y_0 &= x' \wedge y_0, \\ x_0 \wedge y &= x_0 \wedge y' \end{aligned}$$

for each $x, x' \in X$ and each $y, y' \in Y$.

00AB **Example 5.1.1.4.** Here are some examples of smash products of pointed sets.

1. *Smashing With S^0.* For any pointed set X, we have isomorphisms of pointed sets

$$\begin{aligned} S^0 \wedge X &\cong X, \\ X \wedge S^0 &\cong X. \end{aligned}$$

00AC **Proposition 5.1.1.5.** Let (X, x_0) and (Y, y_0) be pointed sets.

00AD 1. *Functoriality.* The assignments $(X, x_0), (Y, y_0), ((X, x_0), (Y, y_0)) \mapsto X \wedge Y$ define functors

$$\begin{aligned} X \wedge - &\colon \mathsf{Sets}_* \longrightarrow \mathsf{Sets}_*, \\ - \wedge Y &\colon \mathsf{Sets}_* \longrightarrow \mathsf{Sets}_*, \\ -_1 \wedge -_2 &\colon \mathsf{Sets}_* \times \mathsf{Sets}_* \longrightarrow \mathsf{Sets}_*. \end{aligned}$$

00AE 2. *Adjointness.* We have adjunctions

$$(X \wedge - \dashv \mathbf{Sets}_*(X, -)) \colon \quad \begin{tikzcd} \mathsf{Sets}_* \arrow[r, bend left, "X \wedge -"] \arrow[r, phantom, "\perp"] & \mathsf{Sets}_*, \arrow[l, bend left, "\mathbf{Sets}_*(X,-)"] \end{tikzcd}$$

$$(- \wedge Y \dashv \mathbf{Sets}_*(Y, -)) \colon \quad \begin{tikzcd} \mathsf{Sets}_* \arrow[r, bend left, "- \wedge Y"] \arrow[r, phantom, "\perp"] & \mathsf{Sets}_*, \arrow[l, bend left, "\mathbf{Sets}_*(Y,-)"] \end{tikzcd}$$

witnessed by bijections

$$\begin{aligned} \mathsf{Sets}_*(X \wedge Y, Z) &\cong \mathsf{Sets}_*(X, \mathbf{Sets}_*(Y, Z)), \\ \mathsf{Sets}_*(X \wedge Y, Z) &\cong \mathsf{Sets}_*(X, \mathbf{Sets}_*(A, Z)), \end{aligned}$$

natural in $(X, x_0), (Y, y_0), (Z, z_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$, which internalise to isomorphisms of pointed sets

$$\begin{aligned} \mathbf{Sets}_*(X \wedge Y, Z) &\cong \mathbf{Sets}_*(X, \mathbf{Sets}_*(Y, Z)), \\ \mathbf{Sets}_*(X \wedge Y, Z) &\cong \mathbf{Sets}_*(X, \mathbf{Sets}_*(A, Z)), \end{aligned}$$

again natural in $(X, x_0), (Y, y_0), (Z, z_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$.

00AF 3. *Closed Symmetric Monoidality.* The quadruple $(\mathsf{Sets}_*, \wedge, S^0, \mathbf{Sets}_*)$ is a closed symmetric monoidal category.

00AG 4. *Morphisms From the Monoidal Unit.* We have a bijection of sets[22]

$$\mathsf{Sets}_*(S^0, X) \cong X,$$

natural in $(X, x_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$, internalising also to an isomorphism of pointed sets

$$\mathbf{Sets}_*(S^0, X) \cong (X, x_0),$$

again natural in $(X, x_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$.

00AH 5. *Symmetric Strong Monoidality With Respect to Free Pointed Sets.* The free pointed set functor of Pointed Sets, Item 1 of Proposition 4.2.1.2 has a symmetric strong monoidal structure

$$\left((-)^+, (-)^{+,\times}, (-)^{+,\times}_{\mathbb{1}}\right) \colon (\mathsf{Sets}, \times, \mathrm{pt}) \longrightarrow (\mathsf{Sets}_*, \wedge, S^0),$$

being equipped with isomorphisms of pointed sets

$$\begin{aligned} (-)^{+,\times}_{X,Y} &\colon X^+ \wedge Y^+ \xrightarrow{\cong} (X \times Y)^+, \\ (-)^{+,\times}_{\mathbb{1}} &\colon S^0 \xrightarrow{\cong} \mathrm{pt}^+, \end{aligned}$$

natural in $X, Y \in \mathrm{Obj}(\mathsf{Sets})$.

00AJ 6. *Distributivity Over Wedge Sums.* We have isomorphisms of pointed sets

$$\begin{aligned} X \wedge (Y \vee Z) &\cong (X \wedge Y) \vee (X \wedge Z), \\ (X \vee Y) \wedge Z &\cong (X \wedge Z) \vee (Y \wedge Z), \end{aligned}$$

natural in $(X, x_0), (Y, y_0), (Z, z_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$.

00AK 7. *Universal Property I.* The symmetric monoidal structure on the category Sets_* is uniquely determined by the following requirements:

   (a) *Two-Sided Preservation of Colimits.* The smash product

   $$\wedge \colon \mathsf{Sets}_* \times \mathsf{Sets}_* \to \mathsf{Sets}_*$$

   of Sets_* preserves colimits separately in each variable.

   (b) *The Unit Object Is S^0.* We have $\mathbb{1}_{\mathsf{Sets}_*} = S^0$.

[22] In other words, the forgetful functor

$$忘 \colon \mathsf{Sets}_* \to \mathsf{Sets}$$

00AL 8. *Universal Property II.* The symmetric monoidal structure on the category Sets_* is the unique symmetric monoidal structure on Sets_* such that the free pointed set functor

$$(-)^+ \colon \mathsf{Sets} \to \mathsf{Sets}_*$$

admits a symmetric monoidal structure.

00AM 9. *Existence of Monoidal Diagonals.* The triple $(\mathsf{Sets}_*, \wedge, S^0)$ is a monoidal category with diagonals:

(a) *Monoidal Diagonals.* The natural transformation

$$\Delta \colon \mathrm{id}_{\mathsf{Sets}_*} \Longrightarrow \wedge \circ \Delta^{\mathsf{Cats}_2}_{\mathsf{Sets}_*}, \qquad \begin{tikzcd} \mathsf{Sets}_* \arrow[rr, bend left, "\mathrm{id}_{\mathsf{Sets}_*}"] \arrow[dr, "\Delta^{\mathsf{Cats}_2}_{\mathsf{Sets}_*}"'] & \arrow[d, phantom, "\Downarrow\Delta"] & \mathsf{Sets}_* \\ & \mathsf{Sets}_* \times \mathsf{Sets}_*, \arrow[ur, "\wedge"'] & \end{tikzcd}$$

whose component

$$\Delta_X \colon (X, x_0) \to (X \wedge X, [(x_0, x_0)])$$

at $(X, x_0) \in \mathrm{Obj}(\mathsf{Sets}_*)$ is given by the composition

$$\begin{aligned} (X, x_0) &\xrightarrow{\Delta_X} (X \times X, (x_0, x_0)) \\ &\twoheadrightarrow \left(\tfrac{X \times X}{X \vee X}, [(x_0, x_0)]\right) \\ &\overset{\text{def}}{=\!=} (X \wedge X, [(x_0, x_0)]) \end{aligned}$$

in Sets_*, is a monoidal natural transformation:

i. *Naturality.* For each morphism $f \colon X \to Y$ of pointed sets, the diagram

$$\begin{tikzcd} X \arrow[r, "f"] \arrow[d, "\Delta_X"'] & Y \arrow[d, "\Delta_Y"] \\ X \wedge X \arrow[r, "f \wedge f"'] & Y \wedge Y \end{tikzcd}$$

commutes.

ii. *Compatibility With Strong Monoidality Constraints.* For each $(X, x_0), (Y, y_0) \in$

defined on objects by sending a pointed set to its underlying set is corepresentable by S^0.

$\mathrm{Obj}(\mathsf{Sets}_*)$, the diagram

$$\begin{tikzcd} X \wedge Y \arrow[r, "\Delta_X \wedge \Delta_Y"] \arrow[d, equal] & (X \wedge X) \wedge (Y \wedge Y) \arrow[d, dashed, "\wr"] \\ X \wedge Y \arrow[r, "\Delta_{X \wedge Y}"'] & (X \wedge Y) \wedge (X \wedge Y) \end{tikzcd}$$

commutes.

iii. *Compatibility With Strong Unitality Constraints.* The diagram

$$\begin{tikzcd} S^0 \arrow[d, equal] \arrow[dr, "(\lambda^{\mathsf{Sets}_*}_{S^0})^{-1} = (\rho^{\mathsf{Sets}_*}_{S^0})^{-1}"] & \\ S^0 \arrow[r, "\Delta_{S^0}"'] & S^0 \wedge S^0 \end{tikzcd}$$

commutes.

(b) *The Diagonal of the Unit.* The component

$$\Delta^{\mathsf{Sets}_*}_{S^0} \colon S^0 \xrightarrow{\cong} S^0 \wedge S^0$$

of the diagonal natural transformation of Sets_* at S^0 is an isomorphism.

00AN 10. *Comonoids in* Sets_*. The symmetric monoidal functor

$$((-)^+, (-)^{+,\times}, (-)^{+,\times}_{\mathbb{1}}) \colon (\mathsf{Sets}, \times, \mathrm{pt}) \to (\mathsf{Sets}_*, \wedge, S^0),$$

of Pointed Sets, Item 4 of Proposition 4.2.1.2 lifts to an equivalence of categories

$$\begin{aligned} \mathsf{CoMon}(\mathsf{Sets}_*, \wedge, S^0) &\overset{\text{eq.}}{\cong} \mathsf{CoMon}(\mathsf{Sets}, \times, \mathrm{pt}) \\ &\cong \mathsf{Sets}. \end{aligned}$$
