Indexed and Fibred Sets

December 3, 2023

This chapter contains a discussion of the un/straightening equivalence in the context of sets, as well as a general discussion of indexed and fibred sets. In particular, it contains:

- 1. A discussion of indexed sets (i.e. functors $K_{\text{disc}} \to \text{Sets}$ with K a set), constructions with them like dependent sums and dependent products, and their properties (Sections 1 and 2);
- 2. A discussion of fibred sets (i.e. maps of sets $X \to K$), constructions with them like dependent sums and dependent products, and their properties (Sections 3 and 4);
- 3. A discussion of the un/straightening equivalence for indexed and fibred sets (Section 5).

³We can also define dependent products via the internal **Hom** in FibSets(K'); see Item 3 of Proposition 4.3.3.

EXAMPLE 4.3.2 ► **EXAMPLES OF DEPENDENT PRODUCTS OF SETS**

Here are some examples of dependent products of sets.

1. Spaces of Sections. Let $K=X, K'=\operatorname{pt}$, and let $\phi\colon E\to X$ be a map of sets. We have a bijection of sets

$$\Pi_{!_X}(\phi) \cong \Gamma_X(\phi)$$

$$\cong \{ h \in \mathsf{Sets}(X, E) \mid \phi \circ h = \mathsf{id}_X \}.$$

2. Function Spaces. Let K = K' = pt. We have a bijection of sets

$$\mathsf{Sets}(X,Y) \cong \Pi_{!_X} \big(!_X^*(Y) \big).$$

PROPOSITION 4.3.3 ► PROPERTIES OF DEPENDENT PRODUCTS OF FIBRED SETS

Let $f: K \to K'$ be a function.

1. Functoriality. The assignment $X \mapsto \Pi_f(X)$ defines a functor

$$\Pi_f \colon \mathsf{FibSets}(K) \to \mathsf{FibSets}(K'),$$

where

· Action on Objects. For each $(X, \phi) \in \mathsf{Obj}(\mathsf{FibSets}(K))$, we have

$$\Pi_f(X,\phi) \stackrel{\text{def}}{=} \Pi_f(X);$$

· Action on Morphisms. For each $(X,\phi), (Y,\psi) \in \mathsf{Obj}(\mathsf{FibSets}(K))$, the action on Hom-sets

 $\Pi_{f|X,Y} \colon \mathsf{Hom}_{\mathsf{FibSets}(K)}(X,Y) \to \mathsf{Hom}_{\mathsf{FibSets}(K')}(\Pi_f(X),\Pi_f(Y))$

of Π_f at $((X,\phi),(Y,\psi))$ is the map sending a morphism of K-fibred sets

$$q: (X, \phi) \to (Y, \psi)$$

to the morphism of K'-fibred sets from

$$\Pi_f(X) \stackrel{\text{def}}{=} \left\{ (x,h) \in \coprod_{x \in K'} \mathsf{Sets} \big(f^{-1}(x), \phi^{-1} \big(f^{-1}(x) \big) \big) \, \middle| \, \phi \circ h = \mathsf{id}_{f^{-1}(x)} \right\};$$

to

$$\Pi_f(Y) \stackrel{\mathrm{def}}{=} \left\{ (x,h) \in \coprod_{x \in K'} \mathrm{Sets} \big(f^{-1}(x), \psi^{-1} \big(f^{-1}(x) \big) \big) \, \middle| \, \psi \circ h = \mathrm{id}_{f^{-1}(x)} \right\};$$

induced by the composition

$$\begin{split} \mathsf{Sets} \big(f^{-1}(x), \phi^{-1} \big(f^{-1}(x) \big) \big) &= \mathsf{Sets} \big(f^{-1}(x), [\psi \circ g]^{-1} \big(f^{-1}(x) \big) \big) \\ &= \mathsf{Sets} \big(f^{-1}(x), g^{-1} \big(\psi^{-1} \big(f^{-1}(x) \big) \big) \big) \\ &\xrightarrow{g_*} \mathsf{Sets} \big(f^{-1}(x), g \big(g^{-1} \big(\psi^{-1} \big(f^{-1}(x) \big) \big) \big) \big) \\ &\xrightarrow{\iota_*} \mathsf{Sets} \big(f^{-1}(x), \psi^{-1} \big(f^{-1}(x) \big) \big), \end{split}$$

where $\iota \colon g\big(g^{-1}\big(\psi^{-1}\big(f^{-1}(x)\big)\big)\big) \hookrightarrow \psi^{-1}\big(f^{-1}(x)\big)$ is the canonical inclusion.¹

2. Interaction With Fibres. We have a bijection of sets

$$\Pi_f(\phi)^{-1}(x) \cong \prod_{y \in f^{-1}(x)} \phi^{-1}(y)$$

for each $x \in K'$.

3. Construction Using the Internal Hom. We have

$$\Pi_f(X,\phi) = (K' \times_{\operatorname{Hom}_{\mathsf{FibSets}(K')}}(f,f) \operatorname{Hom}_{\mathsf{Sets}/K'}(f,f \circ \phi), \operatorname{pr}_1), \qquad \Pi_f(X,\phi) \xrightarrow{\operatorname{pr}_2} \operatorname{Hom}_{\mathsf{Sets}/K'}(f,f \circ \phi)$$

$$K' \xrightarrow{I} \operatorname{Hom}_{\mathsf{FibSets}}(K')(f,f), \operatorname{Hom$$

where the bottom map is defined by

$$I(x) \stackrel{\text{def}}{=} \mathsf{id}_{f^{-1}(x)}$$

for each $x \in K'$.

¹Note that the section condition is satisfied: given $(x,h)\in\Pi_f(X)$, we have

$$\begin{split} \psi \circ [\Pi_f(g)](h) &\stackrel{\text{def}}{=} \psi \circ (g \circ h) \\ &= (\psi \circ g) \circ h \\ &= \phi \circ h \\ &= \operatorname{id}_{f^{-1}(x)}. \end{split}$$

4.4 Internal Homs

Let K be a set and let (X, ϕ) and (Y, ψ) be K-fibred sets.

DEFINITION 4.4.1 ► INTERNAL HOM OF FIBRED SETS

The internal Hom of fibred sets from (X,ϕ) to (Y,ψ) is the fibred set ${\bf Hom_{FibSets}}(X,Y)$ consisting of

- The Underlying Set. The set $\operatorname{\textbf{Hom}}_{\operatorname{FibSets}(K)}(X,Y)$ defined by

· The Fibration. The map of sets1

$$\phi_{\mathsf{Hom}_{\mathsf{FibSets}(K)}(X,Y)} \colon \underbrace{\mathsf{Hom}_{\mathsf{FibSets}(K)}(X,Y)}_{X \in K} \to K$$

defined by sending a map $f : \phi^{-1}(x) \to \psi^{-1}(x)$ to its index $x \in K$.

$$\phi_{\operatorname{Hom}_{\mathsf{FibSets}(K)}(X,Y)|x} \cong \mathsf{Sets}\Big(\phi^{-1}(x),\psi^{-1}(x)\Big)$$

where $\mathsf{Cats}^\mathsf{fth}_{/K_\mathsf{disc}}$ is the full subcategory of $\mathsf{Cats}_{/K_\mathsf{disc}}$ spanned by the faithful functors; see [Nieo4, Theorem 3.1].

· $Un/Straightening\ With\ Span,\ I.\ For\ each\ A,\ B\in Obj(Sets),\ we\ have\ a\ morphism\ of\ sets$

$$\mathsf{Span}(A,B) \to \mathsf{Sets}(A \times B, \mathbb{N} \cup \{\infty\})$$

which assemble into an equivalence of categories between Span (Sets) and the category MRel of "multirelations"; see Spans, Remark 7.5.1.
