# Indexed and Fibred Sets

# December 3, 2023

- OOAH This chapter contains a discussion of the un/straightening equivalence in the context of sets, as well as a general discussion of indexed and fibred sets. In particular, it contains:
  - 1. A discussion of indexed sets (i.e. functors  $K_{\text{disc}} \rightarrow \text{Sets}$  with K a set), constructions with them like dependent sums and dependent products, and their properties (Sections 1 and 2);
  - 2. A discussion of fibred sets (i.e. maps of sets  $X \to K$ ), constructions with them like dependent sums and dependent products, and their properties (Sections 3 and 4);
  - 3. A discussion of the un/straightening equivalence for indexed and fibred sets (Section 5).

The **dependent product**  $^{1}$  of  $(X,\phi)$  is the K'-fibred set  $\Pi_{f}(X)^{2}$  consisting of  $^{3}$ 

· The Underlying Set. The set  $\Pi_f(X)$  defined by
